MEET ALIYAH

“I’ve always liked doodling since I was younger. I self-taught myself how to sketch color theory. I always used to draw stick figures and then I got to a certain point to where I could understand more things like how shapes are simplified. At age 6, I got better. I searched Anatomy and poses. Now, I am at this point where I’m actually good at my art for once and very proud of it. It took years and years of practice.”

IRON COLLECTION BRINGS UNEXPECTED BENEFITS

We have been collecting as much iron as we can find on our playground. We will then use the iron to create magnetic slime. While collecting we discovered how much we loved the process. Jaxson said “We’re gonna have so much iron we can buy a motorbike!” “Yeah so much iron we can get a bagel!” I do another member of our club, said “I can’t believe iron is not heavy!”” The most important part is to collect lots of iron so that it will react to the magnets when in slime form” added Layton.
